6. READING

Professional Development Topics include:

- Bell Ringers vs Prologues
- Cell Phone usefulness
- Drama & Doughnuts (Parental engagement)
- Puppets & Partners
- Memorization & Movies
- Student Creative Empowerment

Why is an Arts Integration PD great for YOUR school?

- According to a [2020 metanalysis](#) of 27 arts integration studies and 20 arts education studies by the National Association of State Boards of Education, “an average child could expect to gain 4 percentile points in relevant outcomes as a result of participating in arts integration intervention and 15 points as a result of participating in arts education intervention.”
- 44 states require that school districts or schools provide arts education in elementary, middle, and high school; 29 define art as a core academic subject; and 27 have arts requirements for high school graduation. While ideally these numbers would be 50 across the board, they are still indicative of the high value that many states place on arts education.
- High schoolers with more than four years of art and music classes scored [an average of 166 points higher on the composite 2016 SAT](#) than high schoolers who took half a year or less of art and music classes. Based on their composite scores, arts students averaged in the 62nd percentile of all test takers while non-arts students averaged in the 44th percentile.
- A [2020 study of over 112,000 public school students](#), the largest of its kind to date, showed that “highly engaged instrumental music students were, on average, academically over one year ahead of their peers.” These results were independent of students’ language/cultural background, neighborhood, or socio-economic status.
- A [2018 randomized control study](#) of over 10,500 3rd through 8th graders found that arts education experiences reduced the proportion of students in a school receiving disciplinary infractions by 3.6 percentage points. This study, which followed Houston’s Arts Access Initiative, also found statistically significant evidence that arts education experiences improve writing achievement and increase students’ compassion for others.
